

# Architects of Air

Bringing a sense of spectacle, AoA's unique multi-purpose tents range from open-sided to fully closed shelters that can operate in diverse environments as a simple canopy or as a sensory covered environment for a range of activities.

They can be used as a space for varied activities including; educational workshops, well-being sessions, home schooling, as a performance area, as a meeting-place, as an info or ticket booth, a product launch, as drink and food areas, as sensory therapy spaces, as a pop-up shelter for the homeless, in care homes, schools.

They are easily set up in a public space, at a festival, in a corporate context, as a fair stand, in health, education and social venues or for private parties.

They are quick to erect and safely anchor to the ground. They are easy to transport so could be sited in varied locations during the course of an event. They are airtight with no fan noise.

## Architects of Air tents are shelters with a difference

*"The Architects of Air tents looked beautiful and worked extremely well for both our info / gathering place and for the socially-distanced storytelling of Sita Brand.*

*I can imagine it working very well in the context of other outdoor festivals and events, particularly as the airflow through the structures made Covid-19 restrictions easy to accommodate. Thank you all so much for the thought, energy and commitment you put into making it work for us".*

Stella Hall, director of Thrift Festival

Length and width measures are in metres

### TECHNICAL REQUIREMENTS

#### Electricity:

One 13A power socket at set-up and take-down

#### Staff:

Two persons at set-up and take-down.  
One AoA manager in attendance at all times

#### Anchorage:

AoA provides pins for grass sites.  
Presenter provides ballast for hard sites:  
- single tent: 1200kg / 2 tents combined: 2200kg
